Overview:
The sub-field of international relations is as theoretically diverse as any in political science. There are debates between realists, liberals, constructivists, and rationalists over what factors explain broad patterns of state behavior. There are arguments between those who view international imperatives as dominant and those who give primacy to domestic politics. These discussions spill over into substantive debates about the causes of conflict, the reasons for cooperation, the role of institutions, and the significance of international law.

No single unified theory or framework provides a key to unlocking all of the subfield. Instead, the purpose of this course is to survey various theories and approaches, and to provide a foundation for subsequent and more focused study. While we will examine the larger theoretical frameworks in the field, we will also apply these frameworks to specific empirical domains (e.g. constructing effective institutions, deterrence, the causes of war).

This course is designed specifically for students enrolled in UGA’s Master of International Policy program (MIP). In many respects the course is similar to a typical Ph.D. seminar in that the focus is on competing theories and empirical analysis. However, the substance here is tilted to security frameworks and issues, and there is a somewhat greater emphasis on foreign policy analysis.

Objectives:
By the end of this course you should:

● Have a good working knowledge of the major academic theories and empirical debates in the subfield of international relations
● Be able to critically evaluate theoretical (and to a lesser extent empirical) claims contained in international relations scholarship. This includes writing detailed, focused critiques that summarize and synthesize the arguments of scholars in the field.
• Be prepared for advanced study in the subfield.

Course Requirements:

Leading Seminar Discussion 100pts: We will take turns leading the weekly discussion. The purpose of these presentations is two-fold. The first is to summarize the main arguments, identify differences and similarities across readings, and to relate the material to past sessions. This sets a common foundation for the class and provides an opportunity to resolve any disagreements about the content. The second is to offer a focused argument(s) about the material. You can discuss the strengths and weakness of a particular subset of authors or confront the entire set of readings.

I intend for the summary to be a somewhat formal exposition as this is a skill that you will rely upon throughout your career. You may use PowerPoint, Prezi, handouts etc. to guide the class through your presentation. Session leaders will then generate questions and provide analysis to motivate our discussion. The grade for each session is based on how well you explain the readings (33%), the quality of your analysis (33%), and how effectively you engage the class in spirited debate (33%). Note: you may not write a critical essay for the sessions that you lead. Each student will do two presentations. Each presentation is worth 50 points. If you do not get an opportunity to make two presentations, then you will need to write one additional analytical essay.

Analytical Essays: (minimum of 7) 50pts each: In this class critical essays are focused, succinct (3 page) statements that provide an analysis on the strengths and weakness of the assigned readings. The goal here is to develop the capacity to quickly get to the core arguments/findings and then move onto your own critical analysis and discussion. Emphasis is placed on analysis and application. Each essay is worth 50 points, are due by 5pm the Sunday before the class in which the readings are discussed.

For reference on how to craft an effective essay of this type, please see:

Research Design 300pts: You will write a research proposal comprised of a research question, literature review, theory, hypotheses, proposed variable operationalization and measurement, and a brief statement on expected findings. A one-page summary of your proposal is due to the class (via email) on Sept. 23rd. At regular intervals you will provide progress reports to the class for critical feedback. Additional information about constructing a proper research design will be distributed in class. You can earn up to 200 points for the final project, and up to 100 points for meeting the milestones/presentations along the way.
**Class Participation 100pts:** Attendance and participation are crucial for an effective seminar. More importantly, however, is that direct student engagement is the most effective way to master the material. You will be evaluated not only on the frequency of your participation, but also on the degree to which your comments: (a) evidence a firm grasp of the material, (b) provide novel insights, (c) integrate material from outside the course, (d) and move our discussion forward. A compelling question is often more helpful than an argument. Participation includes posting questions and/or comments for discussion on the class bulletin board each week (by 6pm Sunday before each class). Students will be graded each week on their participation, these scores are then averaged.

**Grading Scale**
A 100-93, A- 92-90, B+ 89-87, B 86-83, B- 82-80, C+ 79-77, C 76-73, C- 72-70, D 69-60, F 59 and below

**Reading Schedule**

Aug 21: Realism and System Structure.

Aug 28: Neoclassical Realism

Sept. 4 – Holiday
Sept 11: Foreign Policy Analysis

Sept 18: Do Leaders Matter?

Sept 25: Domestic Politics
- (Draft Proposals Discussed – due on the 23rd)

Oct 2: Nukes
Oct 9: Human Security

Oct 16: Deterrence

Oct 23: Cyber

Oct 30: Diplomacy

Nov 6: Psychology and Foreign Policy

Nov 13: Are Academics Relevant?

Nov 20: (Thanksgiving break)

Nov 27
Research Proposal Presentations

Dec 4
Research Proposal Presentations

Final projects due December 8, 3pm.
